

Managed Power Purchase Agreement

An ever more complex and volatile UK energy system creates many challenges but more opportunities for smart companies. Our innovative ManagedPPA gives generators the ability to extend their hedging horizon out for a longer period to spread the risk they are open to in the market. SmartestEnergy takes responsibility for selling your power in appropriate blocks based on agreed price and time triggers.

Reduce the impact of a single price decision by extending your view of the market

Your power is sold seasonally, according to triggers set to help you gain a higher price in a rising market whilst protecting you in a falling market

Trust that our experts are monitoring the market and will hedge your power in line with agreed parameters

We set your reference price and our Hedging Team monitor the market, selling your power when any of the agreed triggers are met

Keep up-to-date with your power price and hedged position with regular emailed reports

Receive weekly position reports to your inbox so you know the price locked in for your power and the remainder left to hedge

About us

SmartestEnergy is the forward-thinking energy supplier helping businesses navigate the new energy landscape. Established since 2001, we're a stable, well-resourced business with an independent voice to recommend what's best for our customers. We create flexible, commercially-minded solutions to help you get the best returns on your project. If you would like to know more about how our ManagedPPA product could work for you, please get in touch with our team.

An agreement structured to help you win in a moving market

- > Your power will be hedged on triggers set against a seasonal reference price
- > As the market increases, your reference price will increase too; allowing you to continuously hedge at a higher price in a rising market
- > If the market price falls your power will be hedged by the price decrease triggers to protect you from further downward price movements

A contract designed to be easy for you

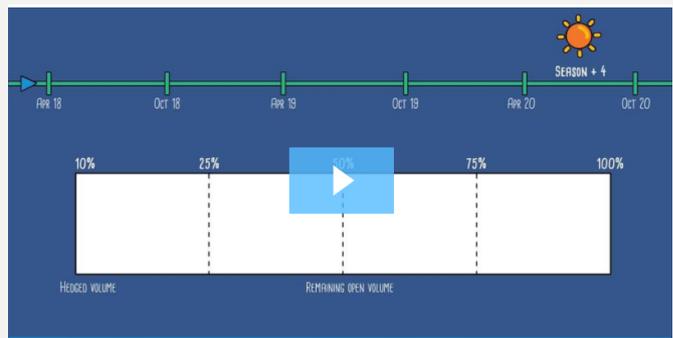

- > A single rate pricing structure, set a season at a time, to make it easy for you to understand the price for your power
- > Five season contract to ensure you can benefit from the stepped seasonal hedging profile
- > Six monthly auto-renewal, so you always have a two year hedging horizon
- > Self-billing process means you just have to validate the invoice we generate

Proven partner of generators

- > Leading purchaser of independent generation in the UK - 17% of independent distributed renewable generation*
- > Dedicated Account Manager and named Customer Service Executive
- > Shared expertise including weekly industry news, guidance on topical issues, plus quarterly forecasts of revenue streams
- > Over 2.8GW PPA portfolio with proven bankability since 2001

Contract features at a glance

- > Five season contract with rolling four season hedging horizon
- > Hedged volume proportional to proximity of delivery season
- > No imbalance costs
- > Self-billing and 20 day payment terms
- > Embedded Benefits passed through
- > Single rate pricing structure
- > Six month auto-renewal, with option to opt out and fix all open volume
- > ROC transfer payment fixed for contract duration, options for £ per ROC or % of ROC value
- > REGO prices in £ per REGO
- > Position reports emailed weekly
- > Access to online portal for forward power price curves and market commentary
