

Renewable gas agreements from SmartestEnergy

Renewable gas has set itself apart from fossil-fuel derived natural gas as a solution to support the UK's sustainable energy transition.

As a proven partner of UK renewable generators since 2001 – and a next generation energy company supporting the UK's transition to a zero-carbon future – SmartestEnergy can help biomethane producers maximise the value they receive for their green gas commodity, as well as the associated Renewable Gas Guarantees of Origin Certificates (RGGOs).

Our flexible Gas Purchasing Agreements (GPAs) support green gas producers in building a reliable revenue stream and can be tailored to suit business needs.

Expert provider of Gas Purchase Agreements

We purchase gas and RGGOs to ensure we help producers maximise their earnings

Established power off-taker

We are the leading purchaser of independent electricity generation, with over 15% market share

Competitive agreements for tailored periods

Choice of pricing options, from index-linked to fixed-price for tailored periods

At a glance...

- > We have a 3.3 GW+ portfolio with over 600 sites across the UK
- > We have a market share of 15% of UK independent renewable generation
- > We are a wholly-owned subsidiary of Marubeni Corporation of Japan, a Fortune 500 company

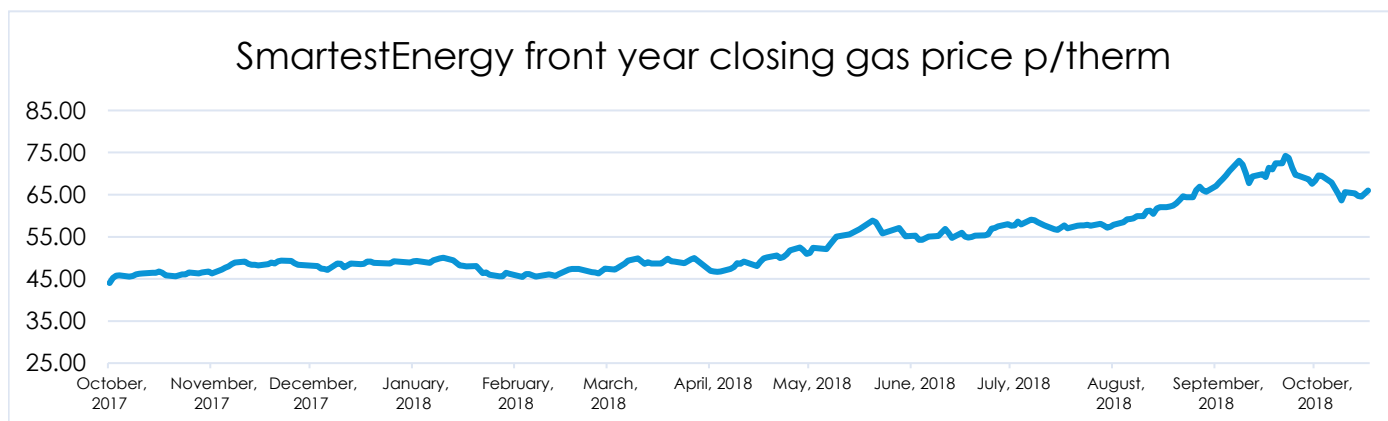

Creating value for renewable gas producers in a growing market

If you operate a biomethane gas production process, we can help to provide you with a route to market for your gas sales and RGGOs. In addition, are knowledgeable about regulatory changes and subsidies, such as the Non-Domestic Renewable Heat Incentive (RHI), which can help you maximise the return of your facility.

Historically, the Renewables Obligation (RO) incentivised using gas to generate renewable electricity, but with targets to decarbonise heat and transport fuel, exporting renewable gas to the grid can be a more efficient process than burning it to generate electricity.

SmartestEnergy offer competitive market rates every day with an index-linked contract, or a fixed price for accurate forecasting. We provide transparent pricing and straightforward contract terms. Payment can be monthly, quarterly or annual to meet your requirements, with invoices paid in 10 days as standard.

The below graph shows a 40% gas price rise over the last year, and with the additional value available from RGGOs, there has never been a better time to discuss your green gas options with SmartestEnergy.

Trusted, experienced partner

SmartestEnergy has been helping renewable generators in the UK since 2001. We have supported our customers through some of the market's most volatile and challenging times. We were the first supplier to pay our generators for Renewable Energy Guarantee of Origin (REGO) certificates, and continue our efforts to create a transparent market value for RGGOs and REGOs to continue the growth of the renewables sector.

We regularly share our knowledge and insight via blogs, newsletters, webinars and events to help renewable generators navigate the complex energy landscape – visit: [smartestenergy.com/info-hub](https://www.smartestenergy.com/info-hub)
